CLASSIC AUTOMATION

is focused on providing quality new and refurbished parts and repair services for control systems and drives. Whether yours is a legacy system installed in the 1970's or a new system put into service last month, our mission is to support you.

We understand the difficulty automation users face when dealing with legacy and obsolete equipment. For this reason, we provide the highest quality products and services for your system regardless of age, make, or model.

- Reduce Maintenance Costs
- Restore System Performance
- Extend System Life

Parts

Classic Automation has an extensive inventory of high quality surplus control system parts and drives.

Our technical staff utilize functional test systems, comprehensive procedures, and decades of experience to ensure that our used and refurbished parts perform within OEM specifications for years to come.

Because we are confident in these processes, our people, and our finished product, Classic Automation guarantees all used/refurbished items with an industry leading 2-year warranty.

Repairs

Identifying and replacing failed components is key to a successful repair. For this reason, Classic Automation relies on a combination of advanced diagnostic equipment, calibrated instruments, the latest IR soldering technology, and sound engineering practices to quickly and effectively repair your item.

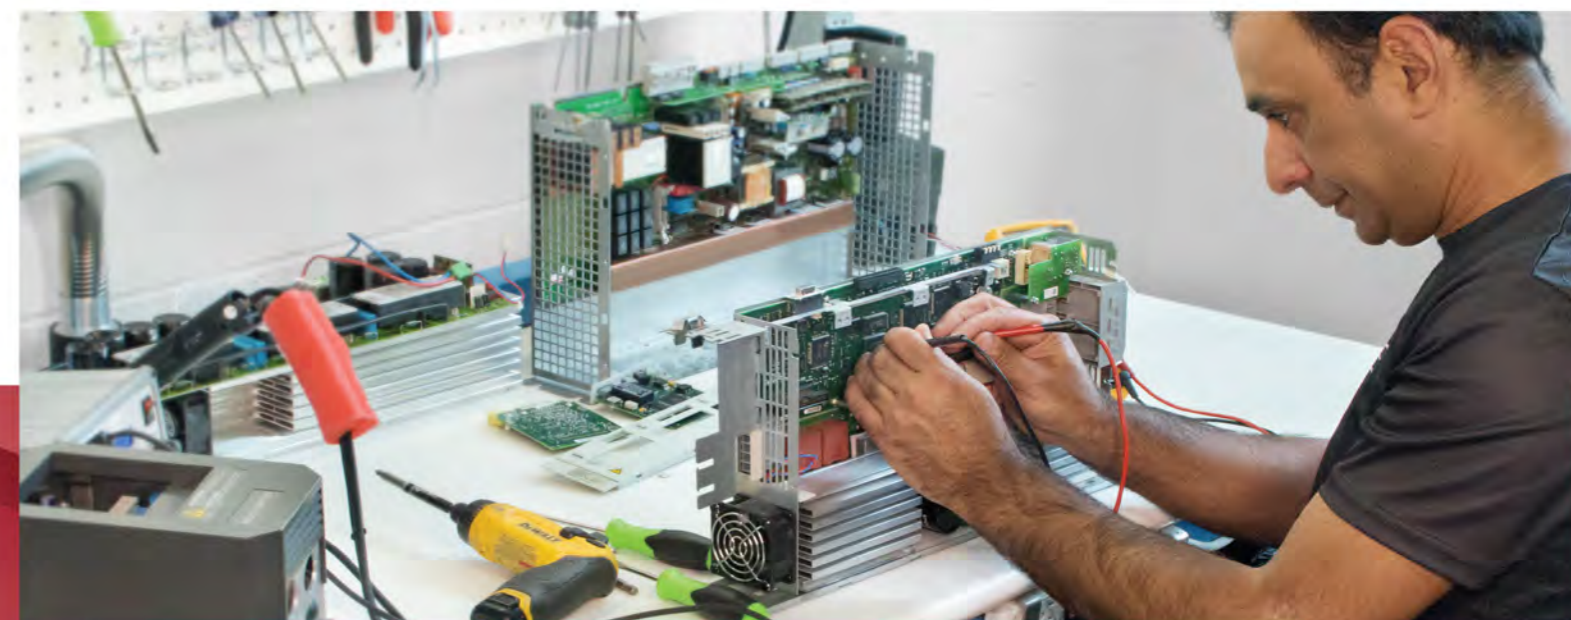

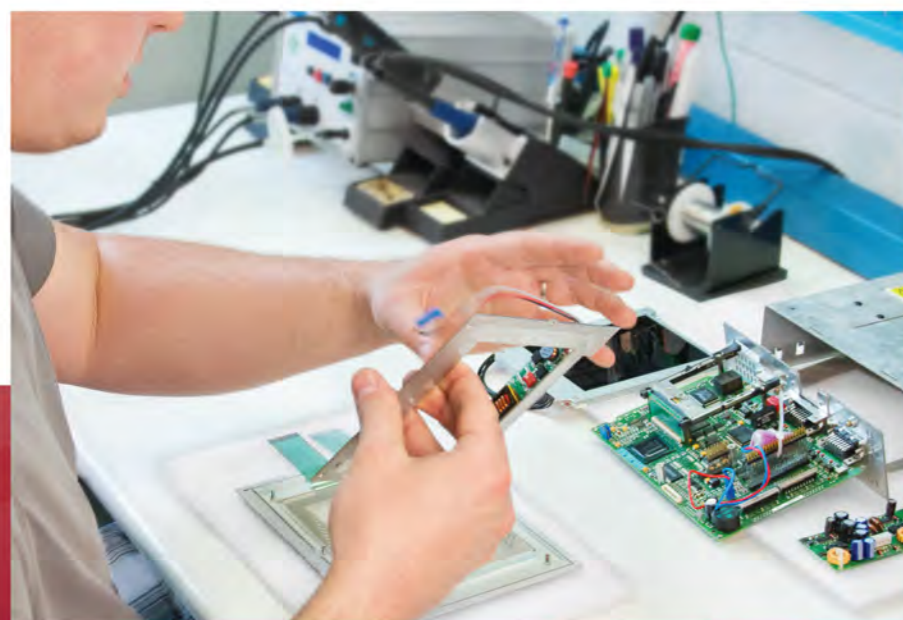

- Control Systems (DCS, PLC, CNC)
- Panel Controller
- HMI and Display Panels
- Industrial PC's
- Drives (Frequency, Inverter, and Servo)
- Power Supplies

Components such as electrolytic capacitors and NVRAM degrade with age, knowing this we replace these as part of our repair process to ensure long life and performance. We also take great care to retain application programs and data parameters. All repairs are covered by the same industry leading 2-year warranty as our used/refurbished parts.

Backup and Documentation Services

We offer services to document, backup, and load your application-specific programs and software. These services are available for a wide range of products including DCS, PLCs, panels, and drives. Files can be emailed or backed up from units being repaired. To learn more about Classic Automation and how we can support your system, don't hesitate to contact us.
